SUMMARY

Java developer specialising in Minecraft modding on Fabric. My main focus is porting large mods across game versions and mod loaders: getting into an unfamiliar codebase, moving it onto Minecraft's new internal APIs, patching vanilla code with Mixin and rewriting rendering, networking and GUI for the current version. I also write my own client and server mods, and build Python back-end services that I run on my own Linux servers.

CORE SKILLS

Java	Java 21 / 25, Gradle, Fabric Loom, reading and adapting large third-party codebases
Modding	Fabric API, Mixin, Forge → Fabric porting, rendering (block entity renderers, OBJ models, RenderPipeline, particles), network packets, GUI, world generation, data packs (recipes, loot, tags)
Backend	Python, aiogram 3, Telethon, payment APIs, Telegram WebApp, SQLite, PostgreSQL
Infrastructure	Linux, systemd, nginx, Docker, GitHub Actions, Cloudflare, WireGuard, nftables
Other	Git, TypeScript, React Native, Bash, PowerShell

PROJECTS

Thaumcraft 6 → Minecraft 26.3 — large mod port

2026 — in progress

Porting the mod from Forge 1.12.2 to Fabric for Minecraft 26.3 (Java 25). Private repository: the original code may not be published.

- ~980 classes and ~124k lines: blocks, items, entities and their AI, block entities, the research system, world generation.
- Rewrote rendering for the 26.3 pipeline: OBJ models, block entity renderers, custom RenderPipelines for particles and GUI, baked crystal models.
- Replaced Forge events with Fabric API and 32 Mixin patches; moved 42 network packets to CustomPacketPayload / StreamCodec.
- Match mechanics to the original one-to-one and verify them in game: research GUI, crafting, HUD, effects.

Carpet Fixes 1.21.11 — open-source mod port

2026

Open source. Unofficial port of a game-mechanics bug-fix mod (a fabric-carpet extension) to a new Minecraft version.

- Moved 246 bytecode Mixin patches onto the changed internal APIs of Minecraft 1.21.11.
- Worked through an unfamiliar codebase and two lines of the project (fxmorin's original and tomalbrc's 1.21 fork).
- Verified it in game; built with Gradle and released on GitHub.

Own Fabric mods

2026

Open source, Minecraft 1.21.11. Client and server mods written from scratch.

- Totem Skins — client mod: a totem renamed to a player's name renders with that player's skin; built on the new render pipeline.
- No F3 Coords — server mod: hides F3 coordinates from non-op players, works with vanilla clients.
- Bulk Whitelist and Deco Blocks — a bulk whitelist command and decorative blocks with recipes.

VAMOS VPN — paid service

2026 — present

Author · development and operations. Telegram bot and web dashboard selling and provisioning VPN access, serving real users.

- AmneziaWG back end: a peer key per user, traffic accounting and per-plan limits.
- Payments (CryptoBot, YooKassa), an internal balance, plans and a referral programme.
- Telegram WebApp dashboard behind Cloudflare → nginx with initData signature checks (HMAC-SHA256); operated on my own Linux server (systemd, nftables).

dvpn — terminal VPN client

2026

Author. Cross-platform client on the mihomo core: TUI with ping and live traffic, one-command install without admin rights, Windows and Linux.

`Python · mihomo · PowerShell · Bash`

EDUCATION

MGKEIT — Moscow State College of Electromechanics and Information Technology

2025 — 2027

Information Systems and Programming, full-time
